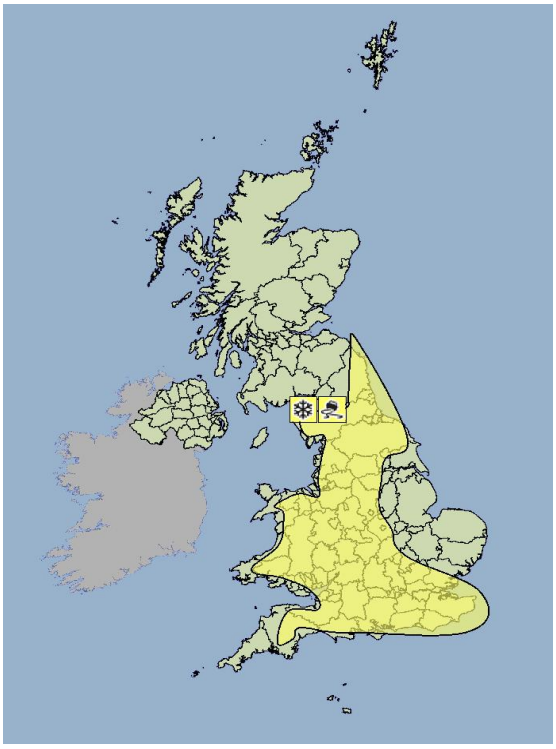
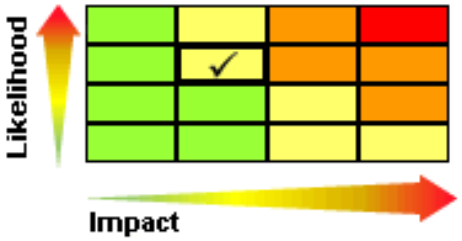
National Severe Weather Warning Service





Chief Forecasters Assessment
2-6 cm of snow is likely in places, especially on higher ground above 100-200 m, where a few places in the Pennines and upland Wales may see more than 10 cm. A slushy cover of 1 to 3 cm seems more likely at lower levels and closer to the western coasts, as well as across most of southern England, with some areas here seeing very little or no snow. Drifting may occur on cross-Pennine routes in the strong to gale force winds.

The Met Office have issued a **Yellow Warning** of **Snow and Ice**

Valid from **20:25 on Tue, 16th Jan 2018** until **11:00 on Wed, 17th Jan 2018**

Showers are falling as sleet, snow and hail already in the north of the warning area, and this threat spreads to parts of Wales, the Midlands and southern England on Tuesday evening and overnight into Wednesday.

Delays to travel are possible, with a lower likelihood of cancellations of public transport. Some roads and pavements will turn icy, with an increased likelihood of some accidents and injuries.

This warning has been extended eastwards across southern England and further into the Midlands.
